- · .Prevalence of human error
- · Complicated approval work flows
- Inefficient expense reporting process

BRAINSTORM P

Person 2

- Lick of variabity can be a major problem in spand,
 making count. In under to manage a humana effectively
 you have to have complete variating over exactly an over payer-tapany's maney is being spent and for what
- With a traditional, manual expense management system. you would typically have to wait till the end of a month or quarter before you get the full picture of company
- This delay means you will be unable to take quick and responsive actions to optimize business spending.

Person 4

- Errors that are a result of human autoriention present one of the most compon expense menaes bent challenges. When you are managing four company's expense manually there is a lot of human part.
- from the hane of Intentional or universional human errors
- In fact, human involvement can lead to errors in data entry, expense reconciliation, duplicate payments and so much more. These errors and the process of fixing them can cost your company a lot of time and money.

GROUP IDEAS &

Issues such as lack of communication, unclear or inaccessible policies, or under-compensated employees may all lead to policy violations.

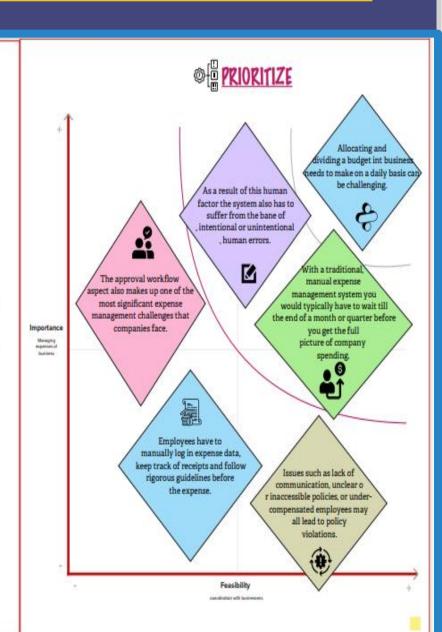

A lot of the complications that arise with expense management challenges start at the part where expenses are reported in the first place.

Out-of-policy expense claims are some of the most significant pain points for any CFO and their team. Ensuring compliance with company expense policies is easier said than done.

Employees have to manually log in expense data, keep track of receipts and follow rigorous guidelines before they can report an expense.

- The approval workflow aspect also makes up one of the most significant expense management challenges
- where a supervisor, manager, or approver must validate to expense claim so that it can progress to
- The approval workflow plays a critical part in ensuring compliance and accountability in a

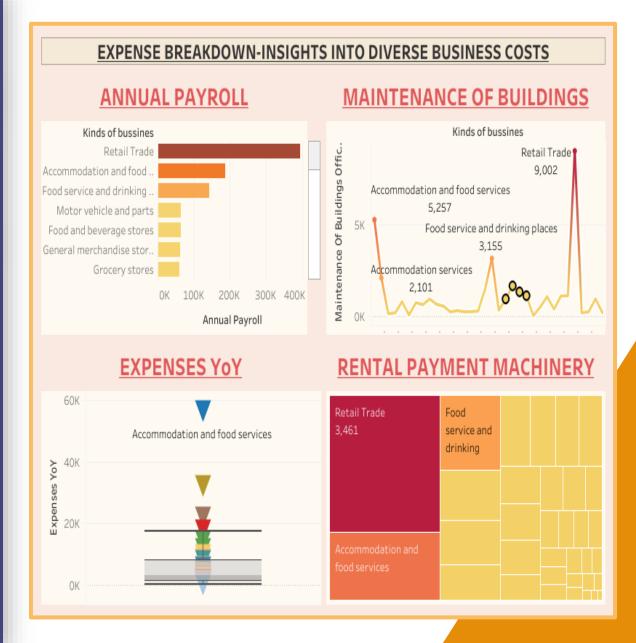

RESULTS

'Annual payroll' bar chart output of estimation tells about the variation of payroll expenses spent by various kinds of business. Retail trade is having a large payroll annually.

'Expenses YoY' visualize about the variation of expenses across all kinds of business. This shows that there is a lot of expenses made by 'Accomodation and food services' business unit.

Rental payment machinery's box plot deliberately explains about the payments expensed for rent of machineries in business.

Lastly, Maintenance of buildings line graph provides insights about the amount expensed to maintain the buildings.

RESULTS

From Employee cost or share expended for 'Insurance and Pension' separately are also depicted using a horizontal bar chart with comparison.

'Equipment costs' expenses are shown with the help of a starred line graph. This demonstrates that there is a large amount of costs spent by Accomodation and food business for purchasing equipment.

The expenses spent to 'Taxes and licenses' of the businesses are shown using a pie graph with top six quantities. 'Retail trade' has occupied nearly one fourth of the pie.

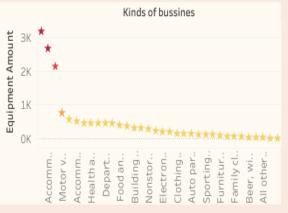

Expenses spent on 'Power consumptions' are also shown using a chart.

EXPENSE INSIGHTS

EMPLOYEE COST (INSURANCE vs PENSION)

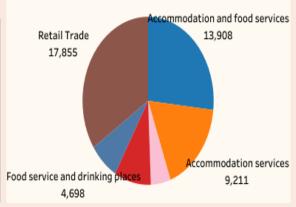

EQUIPMENT COSTS

POWER EXPENDITURE

TAXES AND LICENSES

RESULTS

From pie diagram created for the 'fuel expenses' made by business. Accomodation and food services expended much on fuel, Food and beverage stores expended very less in fuel.

'Transportation' expenses are given in the stack graph. The expenses reached peak with 16,392.

'Contract labour, Employees' salaries expenses are demonstrated as shown using vertical bar graph with comparison as kinds of business as common base to both.

'Advertisement cost' expended are described using a bubble chart with labels. Retail trade has occupied the large bubble of all others.

BUSINESS EXPENDITURE OVERVIEW

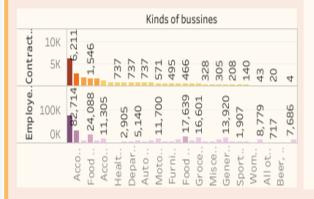

FUEL

Retail Trade 23.38% Accommodation and food services 33.30% Food and beverage stores 22.70% 4.90%

TRANSPORTATION

CONTRACT LABOUR vs EMPLOYEE

ADVERTISEMENT COST

ADVANTAGES:

- From these types of visualisations, it is easy to find which business is expensing a lot and which is less expensive.
- It also provides us clear insights about the variation in the expenses across all the business in a single turn.

DISADVANTAGES:

- These types of visualizations tells about only the outliers of the expenses data and not the full term expenditure outputs.
- Deep learning about the data may not be fulfilled in these type of analysis of data.

CONCLUSION:

- From the visualisations and observations, it was observed that there is a lot of expenses have been made by "Retail trade" business section.
- A lot of fuel and transportation expenses are made by "Accomodation and food services". There is an assumption that this may be due to delivery purpose of food.
- *On looking at all these results of data analysis, it is evident that "Retail trade" business is on top of sales also. Because, the sales depends upon how much we spend on a business.
